

Environment Policy

ANZRP is dedicated to creating a community that collects, processes and safely recycles electronic waste for responsible environmental outcomes. By working in conjunction with industry partners, government, our members and the public we strive to be leaders in the field of product stewardship. We are dedicated to implementing collection and recycling programs for electronic equipment to reduce their environmental impact at end of life and to prevent pollution. We are committed to moving toward a circular economy and the implementation of Product Stewardship approaches for suitable materials.

We are committed to minimising the environmental impact of our operations and supply chain and the promotion of circular economy practices that result in resource conservation. We maintain full compliance with all applicable regulatory requirements as well as voluntary requirements to which we subscribe including certification to ISO 14001:2015. We set environmental objectives and targets for our key environmental impacts and regularly monitor our progress.

It is a requirement of ANZRP that all of our suppliers and contractors also conduct their operations in a socially and environmentally responsible manner. We monitor this through our auditing and stakeholder engagement processes.

Finally, we will facilitate transparency in our reporting by openly communicating our environmental performance, challenges we encounter and achievements we make to our employees, members, service providers and interested stakeholders.

It is important to the success of our environmental management system and vision for continual improvement that all employees are aware of their role and responsibilities in sustaining ANZRP's environmental management system and policy.
